

SSC SHIP SECTION CARRIER

The SSC (Ship Section Carrier) is a functional individually operated lifting equipment driven by one or two engines using hydraulic power for propulsion and lifting. These versatile transporters can operate without or can be equipped with one or two cabins, located beneath the main frame at the front and rear of the equipment. When the equipment is coupled together in a system configuration with more transporters such as other SSCs or NMTs (the New Module Transporter has equivalent size and uses the same technique as the SSC but with increased capacities and versatility at a lower cost), the transportation of oversized blocks or complete ships can be easily and safely achieved.

CC / PC COIL / PALLET CARRIER

The CC / PC (Coil / Pallet Carrier) is an adaptable custom-designed high lifting capacity transportation vehicle, with a single or double cabin, capable of handling a variety of loads. Our coil / pallet carrier is suitable for a broad range of material handling applications including horizontal transport, order picking, loading / unloading and stacking for a variety of industries such as steel, construction, logistics, etc.
