- Suction chamber
- Pressure chamber

Function

By rotation of the gears inside the pump, the pressure fluid (usually hydraulic oil) is drawn into the cavity between the pinion and internal gear. Optimized cross-sectional areas on suction side as well as on pressure side allow operation over a wide range of speed.

In radial direction, the gear chambers are closed by gear meshing and the filler piece. In the axial direction, the axial plates seal the pressure chamber with the minimal possible gap. This design minimizes volume losses and increases efficiency.

Technical Data

Design	Internal gear pump with radial and axial sealing gap compensation
Type	IPVP
Mounting types	SAE hole flange; ISO 3019/1
Line mounting	SAE suction and pressure flange J 518 C Code 61
Sense of rotation	Right hand rotation
Mounting position	any
Shaft load	For details of radial and axial drive shaft loads please contact your Voith Turbo H + L Hydraulic representative
Input pressure	0.8...3 bar absolute pressure (at start up for short time 0.6 bar)
Pressure fluid	HLP mineral oils DIN 51524, part 2 or 3
	10...300 mm ² s ⁻¹ (cSt), up to n=1800 min ⁻¹
Viscosity range of the pressure fluid	10 ... 100 mm ² s ⁻¹ (cSt), up to n _{max}
Permissible start viscosity	max. 2 000 mm ² s ⁻¹ (cSt)
Permissible temperature of the pressure fluid	-20 ... + 80 °C
Required purity of the pressure fluid according to NAS 1638	Class 19/ 17 / 14 (ISO 4406), Class 8 (NAS 1638)
Filtration	Filtration quotient min. $\beta_{20} \geq 75$, recommended $\beta_{10} \geq 100$ (longer life)
Permissible ambient temperature	-20 ... + 60 °C

Calculations

Pump flow	$Q = V_{g\ th} \cdot n \cdot \eta_v \cdot 10^{-3} \text{ [l/min]}$
Power	$P = \frac{Q \cdot \Delta p}{600 \cdot \eta_g} \text{ [kW]}$
$V_{g\ th}$	Pump volume per revolution [cm ³]
n	Speed [min ⁻¹]
η_v	Volumetric efficiency
η_g	Overall efficiency
Δp	Differential pressure [bar]

Characteristics

Type, size – delivery	Displace- ment per revolution [cm ³]	Speed		Delivery		Pressures

The values given apply for:

- Pumping of mineral oils with a viscosity of 20...40 mm²s-1
- An input pressure of 0.8...3.0 bar absolute

Notes:

- Peak pressures apply for 15% of operating time with a maximum cycle time of 1 minute.
- Please inquire about peak pressures at non-standard speeds.
- Due to production tolerances, the pump volume may be reduced by up to 1.5%.
- The maximum speed depends on the pressure.
- **The speed range 0-400 min⁻¹ depends on the pressure.** Please find data on the diagrams on the following pages.

Multi-flow Pumps, Pump Combinations, Pump Combinations in Order of Type and Size

Pump combinations

- IPVP pumps of identical or different sizes can be combined in multiflow pumps.
- All sizes of the relevant pump volume are available as two- or three-flow pumps; four-flow pumps must be designed by Voith Turbo H + L Hydraulic.
- The pumps are arranged in increasing order according to frame size and delivery.

Selection

1. Determine pressure ranges and define the appropriate pump serie(s).
2. Determine pump volume and select the appropriate size
3. Define sequence of the pumps.
4. Check the torques.
5. Determine rotation and suction.
6. Specify mounting

Mounting, assembly

- Multi-flow pumps are generally mounted to the drive by means of a flange.
